

**RESPONSE IS A SNAP.
CHANGE IS A SNAP.
AND THE PRICE IS RIGHT.**

Nason's TD temperature switch utilizes snap disc technology to give you faster response than a traditional bellows mechanism. The use of a snap disc means you are able to configure the probe to virtually any length you need. What's more, Nason has the industry's widest range of options to make customization easy. And like all Nason temperature switches, the TD delivers more for less.

Visit www.nasonptc.com to review operating specifications of the model TD. Call 800.229.4955 or email nassales@nasonptc.com for more information and to request a free custom sample.
